Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE ____ MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 2 and 4-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over anticipated by Kushner U.S. Patent No. 5,741,509 in view of view of Tankovich U.S. Patent No. 5,897,549.

Kushner teaches a method for treatment of a scar comprising the step of applying a wound dressing to the scar, the wound dressing comprising a topical silicon fluid having a viscosity of 30,000 centistoke (low viscosity silicone gel). See the abstract; Col. 1, lines 39-42; Col. 2, lines 20-21; and claims 1 and 7. He further teaches that the wound dressing is a nearly weightless thin film, which completely and uniformly covers the desired treatment area (Col. 1, lines 45-48). Therefore, the step of wiping off the excess gel/wound dressing is inherent to his invention.

However, Kushner does not teach a method of treating the scar using a laser. Lee discloses a method of covering scar surface with a silicone-based gel (Col. 5, lines 5-15). Lee further describes an existing therapy for the treatment of hypertrophic scars and keloids using X-ray irradiation (Col. 4, lines 54-64). However, although Lee uses electromagnetic energy for treating the scar, he does not use a laser. Tankovich discloses an alternative method for treating hypertrophic scars using a laser (Col. 2,
